

The MBIonline Network

Since June, MBI General Contractors have begun utilizing MBI's newest service in their preconstruction process. **The MBIonline Private Construction Office powered by iSqFt** provides General Contractors a comprehensive private electronic plan room, bid management, database management and communication system. As a result of MBI's Strategic Plan, the association introduced the Private Construction Office service to its General Contractor membership at a highly discounted rate due to a MBI provided subsidy off of the fee.

With the introduction of the MBIonline Private Construction Office, **the MBIonline/Construction Update Online powered by iSqFt Network** is the only preconstruction solution available today that effectively connects general contractors, specialty contractors, suppliers, and distributors in a more efficient and cost-effective way. The MBIonline network is targeted to help increase exposure, maximize bid volume, cut document acquisition costs, and provide an easy-to-use tool to help them streamline their entire preconstruction process.

The MBIonline/Construction Update Online Network gives construction professionals access to the most comprehensive listings of public bidding work currently available complete with online documents. In addition, a good number of general contractors from across the state of Iowa utilize the Network to post their private negotiated opportunities and oversee every aspect of their preconstruction process. This combination of public and private project opportunities makes MBIonline and Construction Update Online powered by iSqFt an integral part of these firms' efforts to achieve improved profits.

Through the market's largest network of public and private plan rooms, MBIonline and Construction Update Online powered by iSqFt provides general contractors, specialty contractors and suppliers with the tools and information necessary to manage their preconstruction process in the most efficient and cost-effective manner.
